

# 1. Installing the Driver

**Caution: DO NOT** connect the adapter to your computer before installing the provided driver.

Insert the provided driver CD into your CD-ROM drive. The setup program will run automatically. If not, locate and double-click the **Setup.exe** file under the Driver folder on the CD. Then follow the on-screen prompts to complete the installation.

For Windows Vista users:

- If you encounter a **User Account Control** Dialog box when attempting to install a program, enter an administrator password or click **Allow** to start the installation.
- When prompted to restart your computer, click **Yes**. Note that a reboot is always needed for a successful installation. If the reboot prompt doesn't appear, always make sure to manually reboot your computer.
- Whenever the driver signature dialog box appears, always click **Install this driver software anyway**.

For Windows XP Users:

Whenever the driver signature dialog box appears, always click the **Continue Anyway** to continue with the installation.

For Windows 2000 users:

- If prompted for system patch after running the setup file, please download and install the required patch first. After that, execute the setup file again to install the driver.
- Whenever the driver compatibility dialog box appears, always click **Yes** to continue with the installation.

## 2. Making the Connection

Connect the smaller end of the USB cable to the adapter. Then connect the other end of the USB cable to a USB 2.0 port on your computer.

If your monitor is not yet connected to the adapter, make the connection and power on your monitor.

After the connection, Windows Vista/2000 will automatically complete the installation and an identical screen will appear on the add-on monitor. On Windows Vista, if the add-on monitor is blank, reboot your system again.

On Windows XP, a **Found New hardware Wizard** will appear. Please take these steps to complete the installation.

- a. Select **No, not this time** to ignore Windows Updates and click **Next**.
- b. Select **Install the software automatically** (Recommended) and click **Next**.
- c. Click **Finish** to complete the installation.
- d. When installation is complete, an identical screen will appear on the add-on monitor.

Note: Before the installation is complete, it's normal that the screen flicks black a couple times.

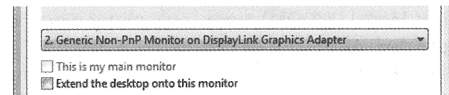

## 3. Changing the Display Mode

There are several ways you can utilize the monitor attached on the adapter. The add-on monitor can be configured to use either "mirror mode" or "extended mode" (extend your Windows desktop to the add-on monitor).

To change the mode, bring out the setting dialog box by positioning the mouse anywhere on your computer desktop, right-click and select **Personalize > Display Settings** on Vista or **Properties > Settings** on XP/2000

To use mirror mode:

- a. In the Display drop-down menu, select the option that ends with **DisplayLink Graphics Adapter**.
- b. Uncheck the **Extend the desktop onto this monitor** box on Vista or **Extend my Windows desktop onto this monitor** box on XP/2000.

To use extended mode:

- a. In the **Display** drop-down menu, select the option that ends with **DisplayLink Graphics Adapter**.
