- Graphic Designers
- Desktop Publishers
- Military/Aerospace
- Classroom & Corporate Training
- Radio & Television Stations
- Data Centers
- Network Administrators
- Help Desks

ex·tend·it PC/MAC2000

Cross Platform Switch-Professional Series

Now you can work on any combination of Macintosh PC and/or SGI computers - using only one monitor, keyboard and mouse.

The PC/Mac2000 cross platform switch saves space - there's no need to work on a desk crowded with multiple monitors, keyboards and mouse devices. It saves time - there's no need to move from one monitor to another to access different computers. And, it saves money - there's no need to purchase additional monitors, mouse devices, keyboards etc.

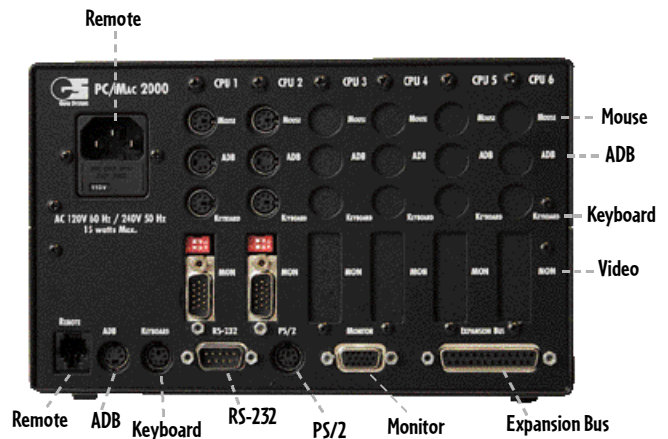

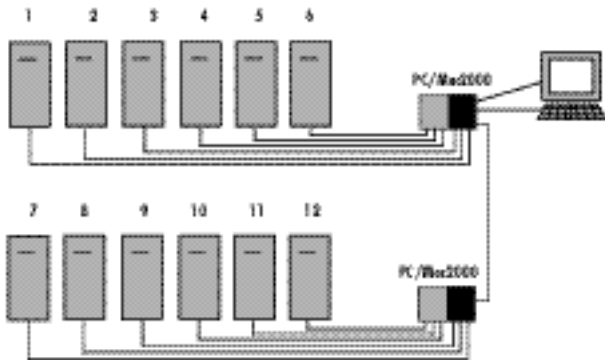

By connecting multiple PC/Mac2000s in cascade, you can easily access over 60 computers from one workstation.

How it works:

The PC/Mac2000 switches between PC and Macintosh computers located near each other. Simply plug your peripherals directly into the switch, connect the cables to the computers you want to control, select the computer you want to work on, and you're ready.

The PC/Mac2000 allows you to choose between the Macintosh or PC keyboard/video/mouse combination. Switching between computers is done from the keyboard, keyswitch or by remote control using Gefen's RMT-16.

The PC/MAC2000 is rackmountable.

Specifications:

Video Amplifier Bandwidth: 350 MHz
 Input Video Signal: 1.2 volts p-p
